L'indice di vecchiaia in Italia

(Istat, 2012)

Sarcopenia
Perdita di massa
muscolare
con l'invecchiamento

Patologie
acute e croniche

Disabilità'

Deterioramento della
condizione fisica
Debolezza muscolare
Comparsa di dispnea
durante l'attivita'

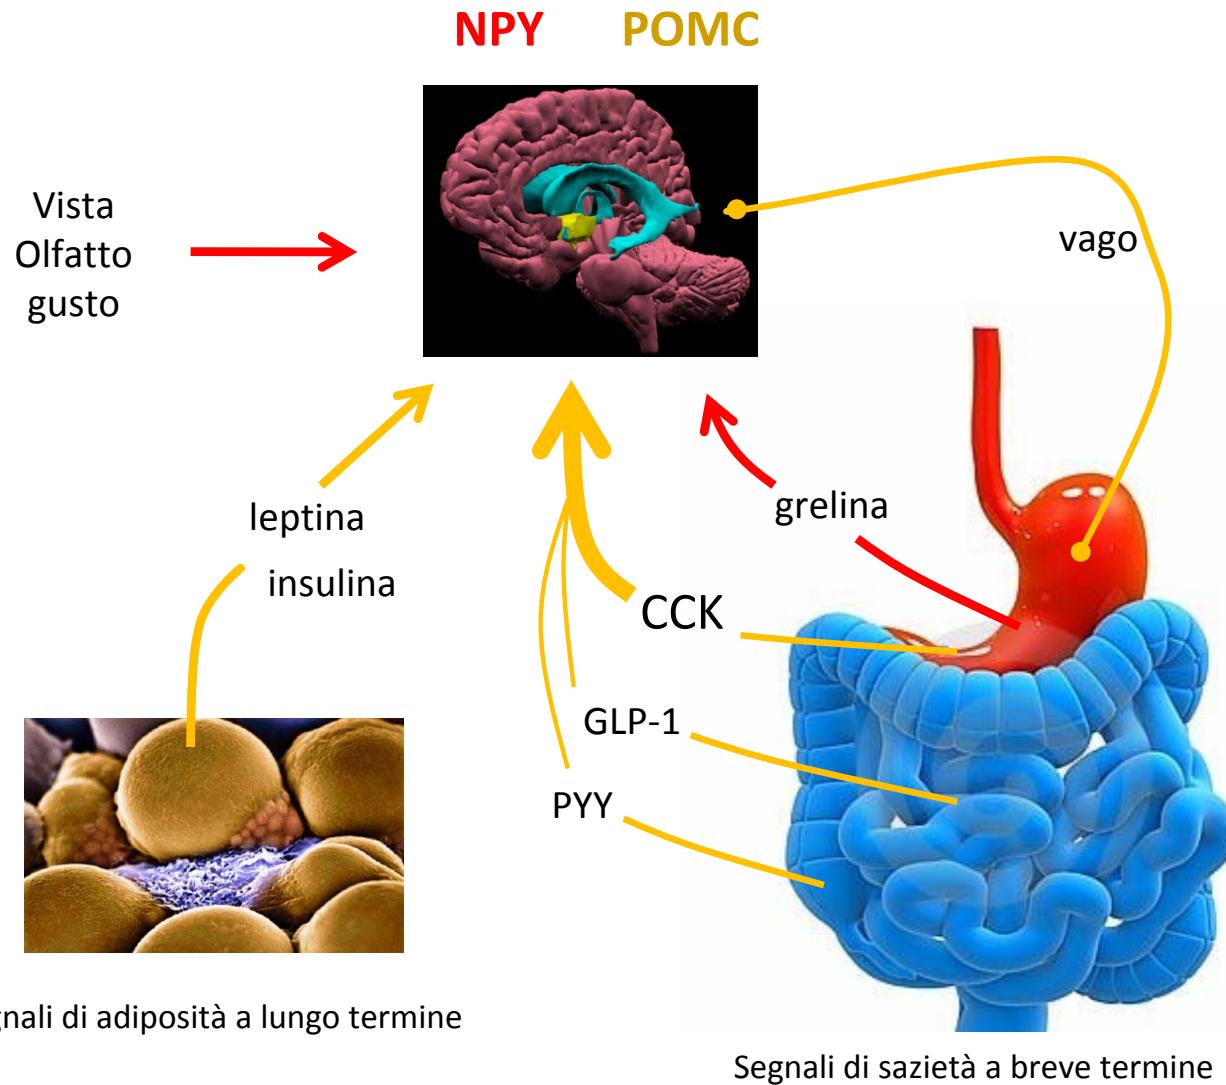

L'attività non viene svolta

Deterioramento della
condizione fisica
Debolezza muscolare

Scenarios for Change in Population Burden of Disability from 1990 to 2040

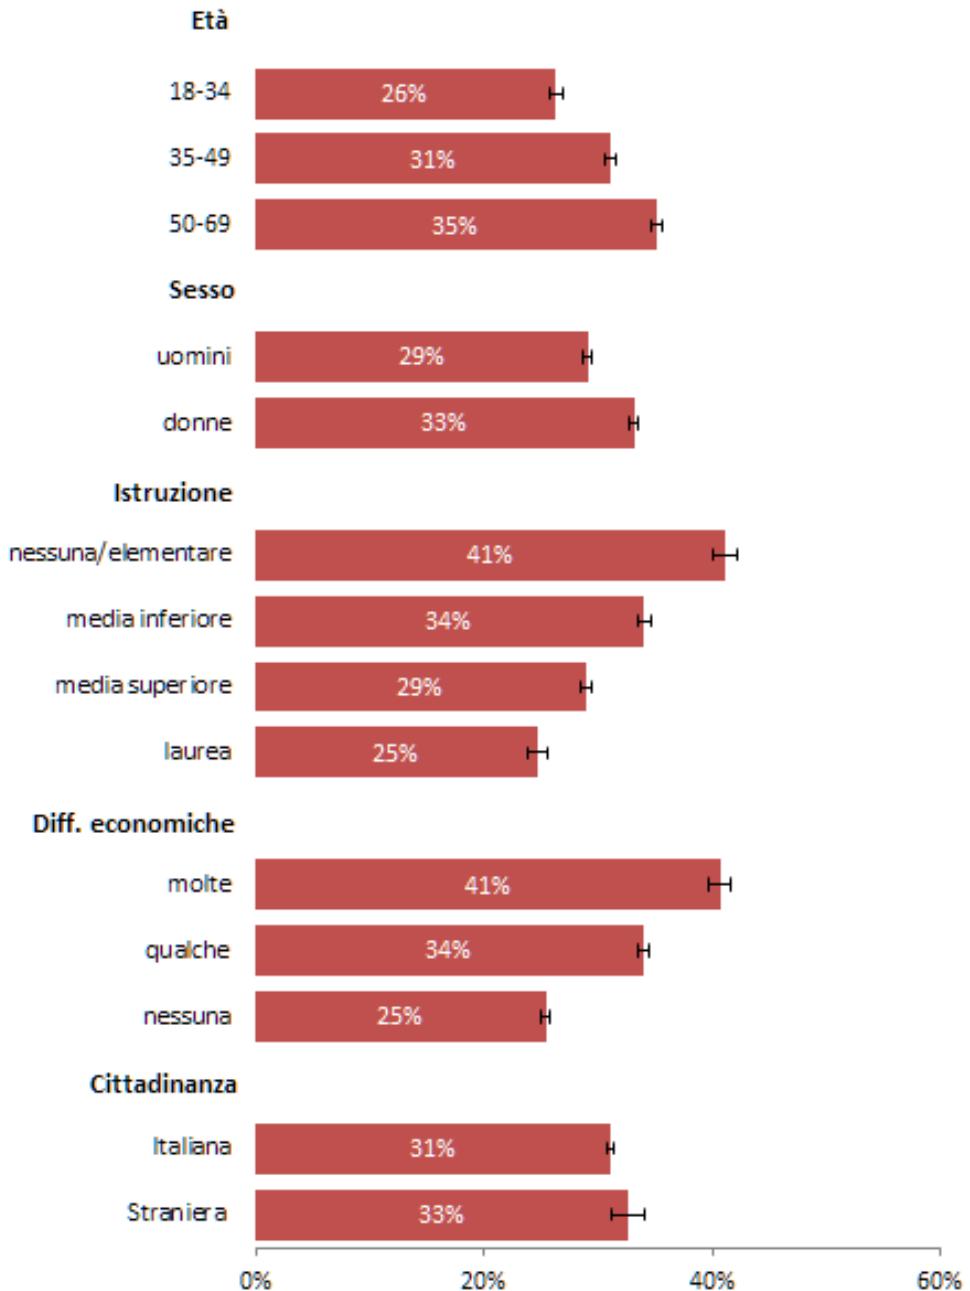

Rappresentazione schematica del controllo dell'introito energetico. In rosso i segnali orezzigeni che spingono a consumare cibo, in giallo i segnali anorezzigeni, di sazietà. Nell'anziano è stata dimostrata la riduzione degli stimoli orezzigeni e l'aumento dei segnali di sazietà sia a breve che a lungo termine.

Effects of 10 Days of Bed Rest in Older Adults

Table. Effects of 10 Days of Bed Rest in Older Adults

No. of Participants (N = 12)*	Mean (95% Confidence Interval)				P Value	
	Bed Rest		Change			
	Before	After				
Muscle fractional synthetic rate, % per h†	10	0.077 (0.059 to 0.095)	0.051 (0.035 to 0.067)	-0.027 (-0.007 to -0.047)	.02	
% Change				-30.0 (-7.0 to -54.0)		
DEXA lean mass, kg‡	10					
Whole body		48.05 (40.61 to 55.49)	46.51 (39.57 to 53.45)	-1.50 (-0.62 to -2.48)	.004	
% Change				-3.2 (-1.4 to -5.0)		
Lower Extremity		15.01 (12.41 to 17.61)	14.06 (11.85 to 16.27)	-0.95 (-0.42 to -1.48)	.003	
% Change				-6.3 (-3.1 to -9.5)		
Isokinetic muscle strength, Nm per s§	11	120 (96 to 145)	101 (81 to 121)	-19 (-11 to -30)	.001	
% Change				-15.6 (-8.0 to -23.1)		

Abbreviation: DEXA, dual-energy x-ray absorptiometry; Nm, Newton meter.

*One participant was excluded from all analyses because of insufficient protein intake.

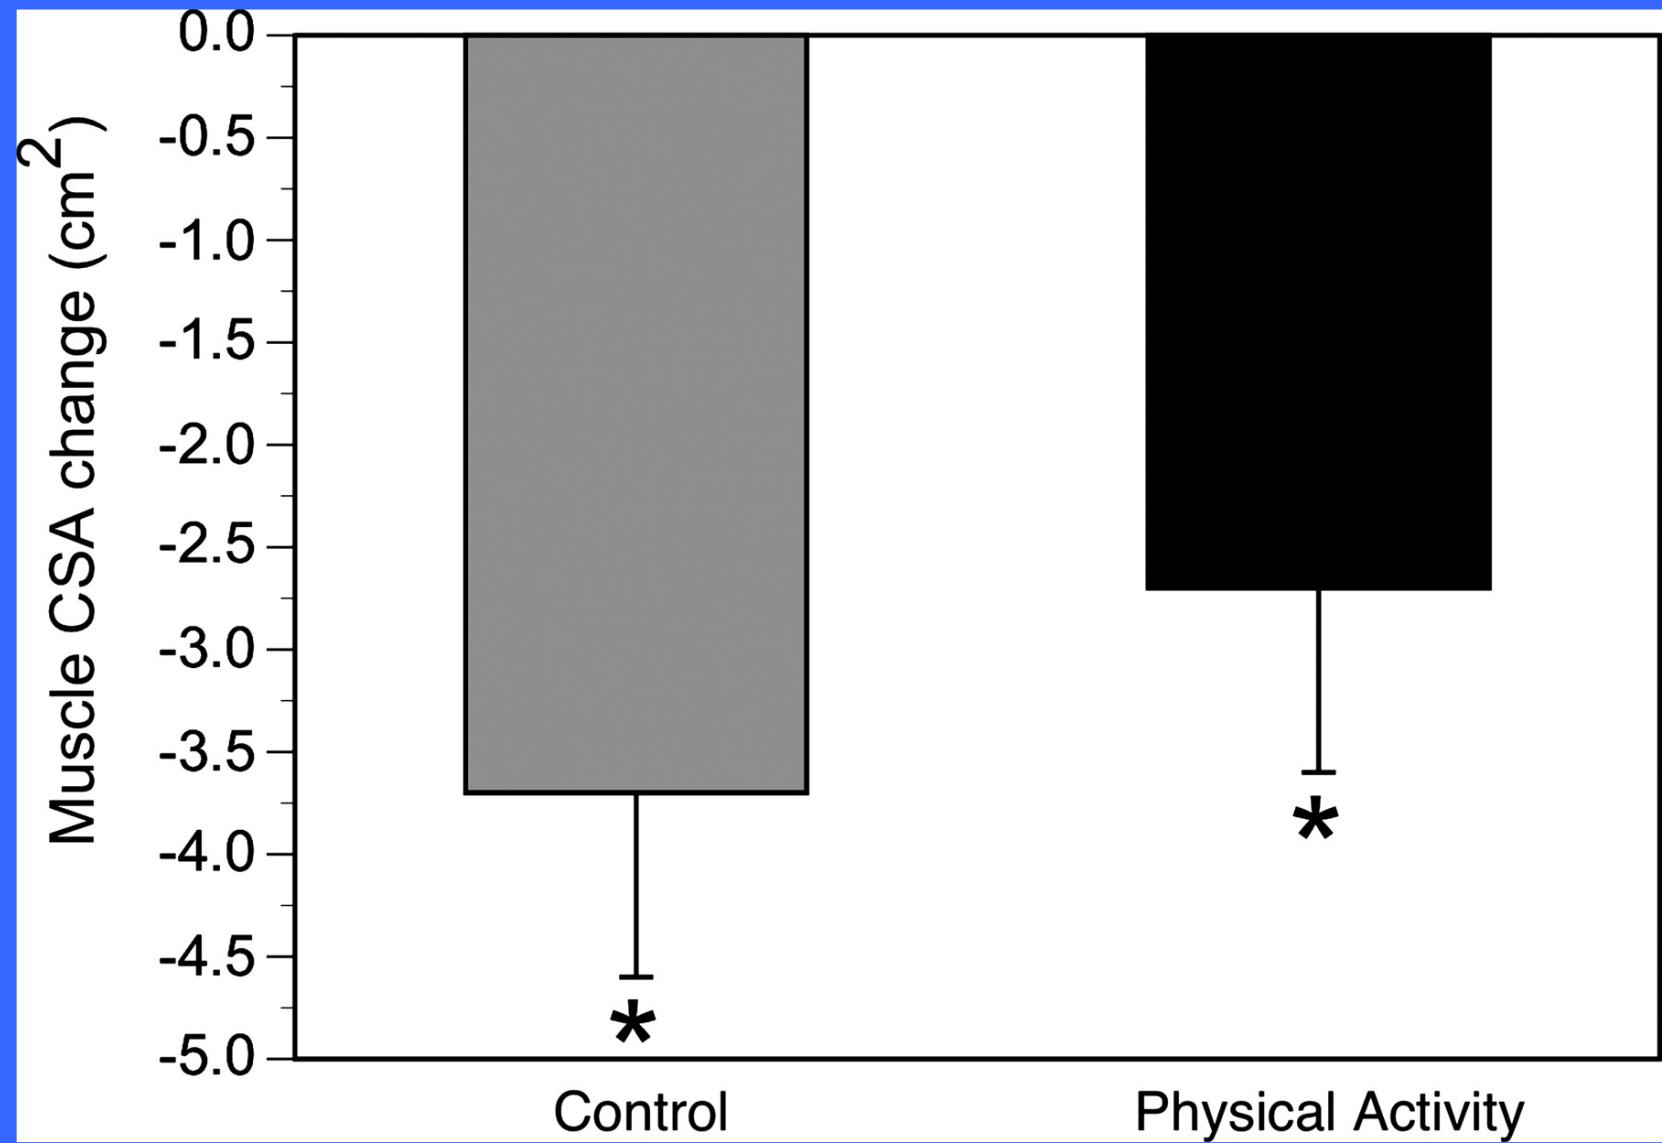

†Because of a technical error, the muscle fractional synthesis rate measurement was excluded for 1 participant.

‡One participant was excluded from the DEXA analysis because the scan before bed rest was not administered.

§Isokinetic knee extension at 60° per second.

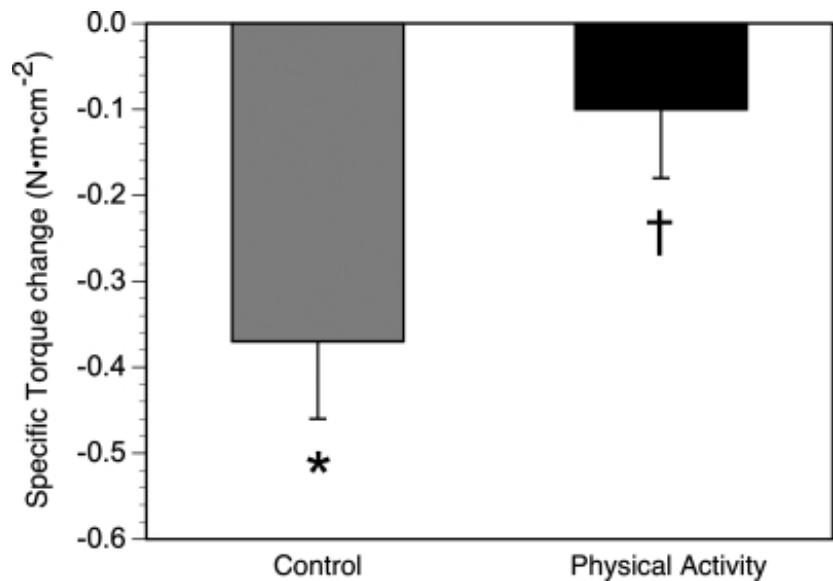

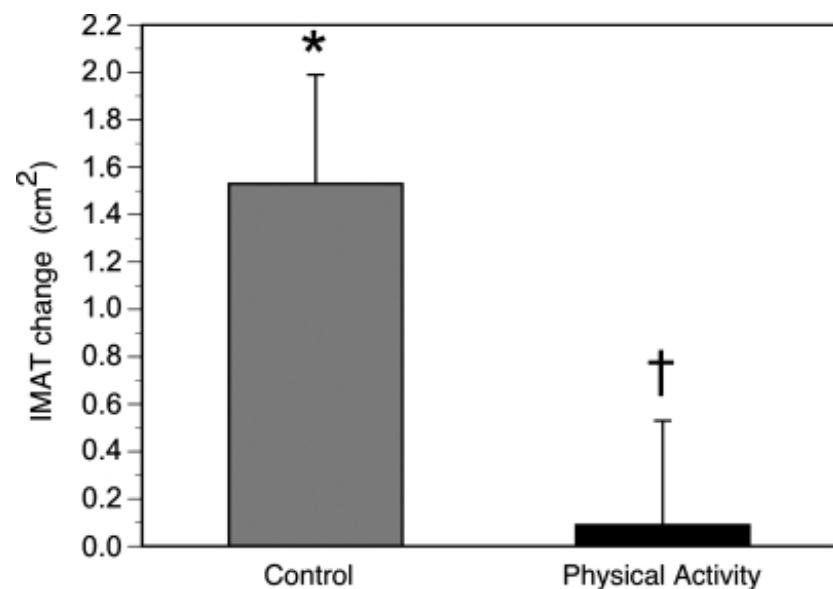

12-months aerobic, strength, flexibility, and balance training.
Three times 40- to 60-min supervised center-based
physical activity sessions per week

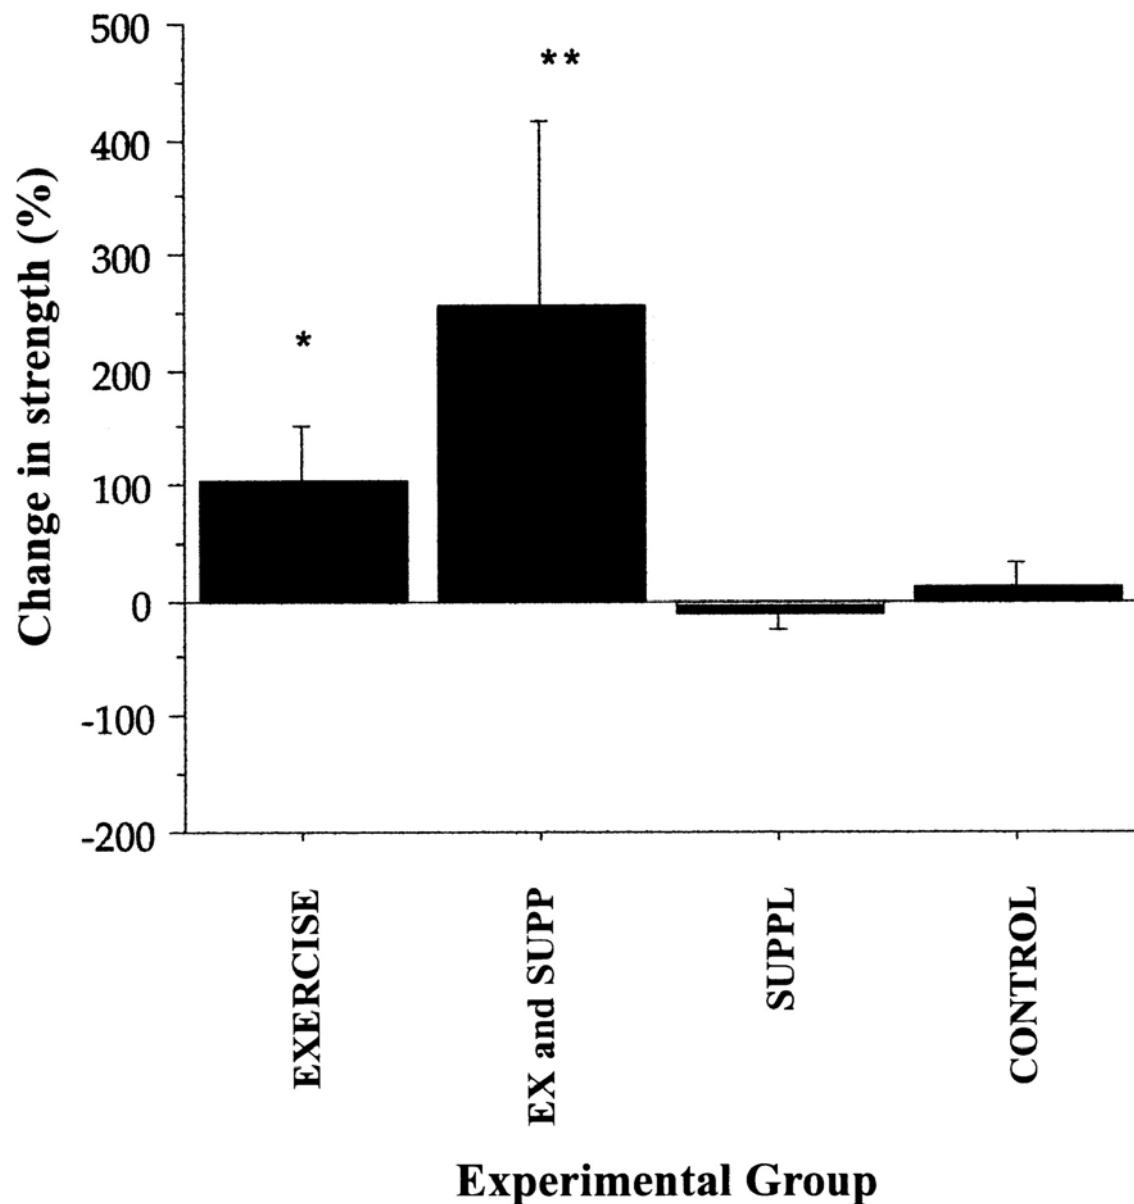

Goodpaster BH et al. J Appl Physiol 2008;105:1498-1503

Effects of physical activity on strength and skeletal muscle fat infiltration in older adults: a randomized controlled trial.

Aumento della forza dopo sollevamento pesi in anziani fragili

Strength measured as the combined 1-repetition maximum of bilateral hip and knee extensor muscle groups after 10 wk of intervention

Raccomandazioni generali per l'esercizio fisico nella popolazione anziana

	Esercizio di potenza	Esercizio aerobico	Esercizio di stretching	Esercizio di equilibrio
Dose				
frequenza	2-3g/sett	3-7g/sett	2-7g/sett	1-7g/sett
volume	1-3 set di 8-12 ripetizioni, 8-10 gruppi muscolari maggiori	20-60 min	4 ripetizioni, 30 sec/stretch, 6-10 gruppi muscolari maggiori	1-2 set di 4-10 esercizi di postura statica e dinamica,
Intensità	15-17 scala di Borg, 10 sec a ripetizione	11-14 scala di Borg, 45-80% Fc massima	stretch fino alla max distanza senza dolore	difficoltà crescente
Caratteristiche per la sicurezza e efficacia	Velocità lenta, Buona esecuzione Non trattenere il Respiro Aumento progressivo pesi	Attività a basso impatto Se possibile Indossando pesi	-	Monitoraggio Ambiente Protetto Graduale Aumento della difficoltà

The geriatric quintet

Quinzano, Verona

21 women

Baseline evaluation

3 months evaluation

6 months evaluation

The adherence at the brisk walking sessions was 90% and 65% respectively at 3 and 6 months follow-up.

(Walking and Aging Verona) WAVE Study

Intervention

All the subjects were involved in brisk walking sessions 1 h per day on 2 days each week under the supervision of a qualified physical education instructor for 24 weeks.

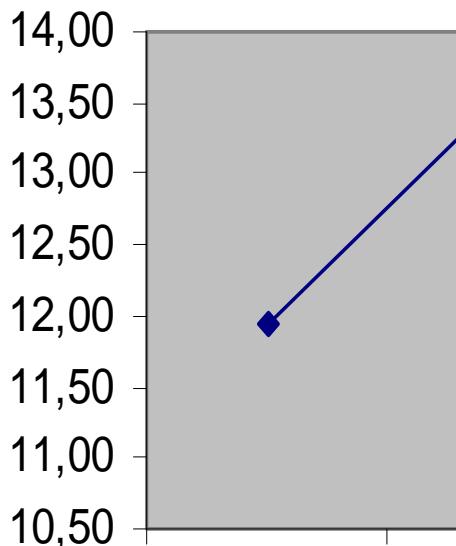

The physical activity intensity has been calculated on the basis of the Borg Scale (RPE scale = 13 "somewhat hard").
